

FOR IMMEDIATE RELEASE

InfoZen Joins the Center for Applied Identity Management Research

InfoZen Chief Technology Officer Alain Kouyate to Serve on CAIMR's Research Planning Committee

Washington, D.C. – October 26, 2009 - [The Center for Applied Identity Management Research](#) (CAIMR), a public-private partnership dedicated to solving society's most critical identity management challenges through applied research, today announced that [InfoZen](#), a leader in [automated risk assessment and identity management solutions](#), has joined the organization at the Associate Partner level. Alain Kouyate, Chief Technology Officer at InfoZen, will serve on CAIMR's Research Planning Committee, providing valuable insight into the organization's critical identity management research and publications.

Launched in October 2008, CAIMR is a trusted public-private partnership of cross-disciplinary experts focused on conducting applied research that addresses current and future identity management challenges in order to provide real-world solutions. Those societal challenges include cyber crime, identity theft and fraud, attacks on critical infrastructure systems, data breaches, financial crimes and more, that impact individuals, public safety, commerce, government and national security. CAIMR will identify these key identity management challenges and the existing gaps in knowledge surrounding them in order to provide the much-needed applied research to properly address them.

"InfoZen's comprehensive screening, credentialing and fraud detection capabilities, as well as its critical infrastructure solutions, enhances CAIMR's membership goal of assembling the industry's leading minds on identity management issues," said Dr. Gary R. Gordon, Executive Director of CAIMR. "Alain's history in building new security applications will further augment the breadth of our experienced and highly-skilled Research Planning Committee."

At the Associate Partner level, InfoZen will participate in CAIMR's research planning committees and provide peer review of the organization's research reports and publications. Kouyate is a member of CAIMR's Research Planning Committee which is charged with defining the organization's research agenda, prioritizing research projects, identifying sources of data and assisting in procuring project funding.

"Private and public entities come to us frequently with challenges about lack of effective solutions to determine the identity of people who need credentials to comply with national security requirements or determine fraudulent providers of goods and services in the social and entitlement programs," said Raj Ananthanpillai, Chairman, CEO and President of InfoZen. "Partnering with CAIMR is just one more way for us to further research the identity validation landscape and collaborate with other industry leaders on how to better protect our customers."

Kouyate has more than 18 years of industry experience building and deploying complex information technology solutions for Fortune 100 organizations and in the Federal Government space. His technical expertise spans areas such as web portals, complex process automation, transactional database systems, data warehouses, client/server applications, legacy system integration and enterprise application integration, ETL and data mining, Object Oriented Methodologies, Agile Methodologies and the Rational Process.

Other CAIMR membership levels include Partners and Alliance Partners. For more information on joining CAIMR, please visit: <http://www.caimr.org>.

About InfoZen

Founded in 1995, InfoZen develops and implements mission-critical solutions for challenges confronting the Public Sector. Since 1995, InfoZen has been helping customers in national security, intelligence, law enforcement and healthcare. By combining proven methodologies and leading-edge technologies with innovative solutions, we are able to solve complex challenges with agility. At InfoZen, we're dedicated to providing comprehensive, practical and cost-effective solutions resulting in 100% customer satisfaction. Our employees offer unsurpassed expertise in areas that include robust and proven vetting and credentialing of all at risk populations as it pertains to national security; critical infrastructure solutions that provide a full range of capabilities to support large-scale, mission-critical systems, including developing and support of mission applications. These core competencies are strengthened by our proprietary scalable software platform, [RapidAdjudicator™](#). Whether we are helping our customers choose new technology or management methods, providing systems integration and implementation services, or building analytics-based decision support tools, InfoZen delivers solid support for mission success with measurable results. InfoZen is dedicated to delivering best-value solutions that are built on sound strategy and technical excellence. Our vision is to be the absolute best technologically-innovative organization, measured by the value we deliver to our customers and our strength and spirit as a company.
